Announcement Content Tips

Institutional Announcement: Journal Article Publication

Overview

To obtain additional visibility for newly-published research, we encourage our authors to work with their respective institution/employer's communications department on content that can be posted release. This is greatly encouraged for articles published via Open Access, since the content can be downloaded by the general public at no cost.

Article Tips

One key element in communicating technical content is the ability to describe the discovery and its impact in non-technical terms, and how it will help advance technology for humanity and impact our daily lives.

Below is a top 10 list of items that should be included in an announcement. This content can then be promoted over social media by the university or institution.

- Author's name
- Author's job title
- University/company affiliation
- Title of published article
- Title of journal or magazine
- URL that leads to the article
- Brief summary of the article (non technical terms):
 - Purpose of the research
 - How it will impact humanity or our environment.

在IEEE期刊發表開放取用文章的益處

2021 IEEE作者調查

Those preferring fully OA journals

Those preferring traditional journals

什麼是開放取用 (Open Access, OA)

- ▶ 文章在出版後免費提供，無需訂閱付費
- ▶ 通常由作者或研究資助機構支付文章處理費 (APC)
- ▶ 可能包括與傳統出版物不同的版權或授權合約

Gold OA - 金色開放取用

Green OA - 綠色開放取用

什麼是掠奪性 (predatory) 期刊?

掠奪性出版是一種剝削性出版商業模式，涉及向作者收取出版費，很少進行或沒有同行評審，製作品質差且難以找到。

警惕!

- ▶ 不專業的網站
- ▶ 誘人的緊急提交邀請
- ▶ 不尋常的收稿範圍
- ▶ 缺乏引用指標

如何規避掠奪性期刊

Abstract:

In this paper, we propose a physical layer security scheme that exploits a novel index modulation (IM) technique for coordinate interleaved orthogonal designs (CIOD). Utilizing the diversity gain of CIOD transmission, the proposed scheme, named CIOD-IM, provides an improved spectral efficiency by means of IM. In order to provide a satisfactory secrecy rate, we design a particular artificial noise matrix, which does not affect the performance of the legitimate receiver, while deteriorating the performance of the eavesdropper. We derive expressions of the ergodic secrecy rate and the theoretical bit error rate upper bound. In addition, we analyze the case of imperfect channel estimation by taking practical concerns into consideration. It is shown via computer simulations that the proposed scheme outperforms the existing IM-based schemes and might be a candidate for future secure communication systems.

An error message is displayed in a modal window:

⚠ Institution not connected to Ringgold

Your selected institution was manually entered and not connected to Ringgold. To connect your institution to Ringgold select the institution from the dropdown of institutions provided as you type.

Why is this important?

1. Ringgold IDs are used by Publishers to determine if your institutional affiliation entitles you to a discount for APCs.
2. Allows organizations to easily identify your institution from others that use similar names.
